

MacLevel Smiley Pack

About:

MacLevel Smiley pack is a set of smilies created from those in Mac OS X iChat, it also features quite a few additions. The pack works with PHPBB version 2.0. The original set of smilies for iChat and Adium may be downloaded at <http://www.dotquantum.com/projectichat.php> .

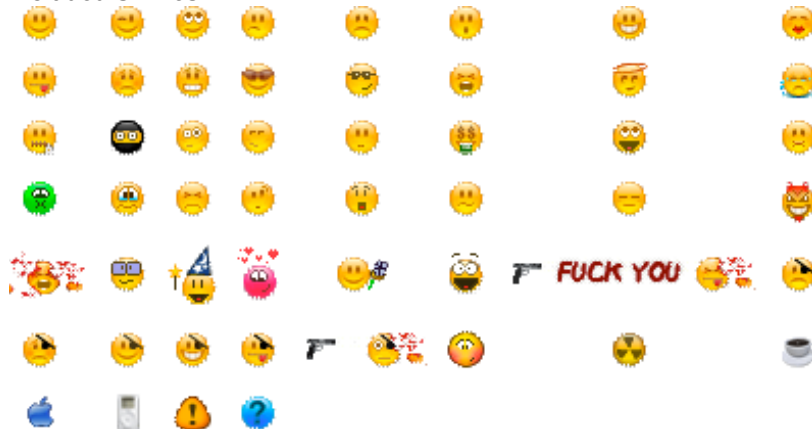

Installation:

By now you've un-archived the .zip file. This smiley pack is installed in much the same way as all other one. Upload the folder called "smiles" to the images folder of your PHPBB (example: www.yourdomain.com/forums/images/) Make sure to delete the old smiles folder to get rid of all your old smilies. Next, go to your PHPBB administration control panel, and select the "Smilies" section from the right-hand navigation bar. Scroll down to the bottom of the page and click the "Import Smiley Pack". From the Select Pack pull-down menu select "MLSmilies.pak", then check the "Delete existing smilies before import" box.

Finally, click the "Import Smileys" button, and then your done. There are many extra smiley images included, but not installed by the .pak file, you may manually add them if you like.

Included Smilies:
